

OPERATION ZERO

ORIGINS

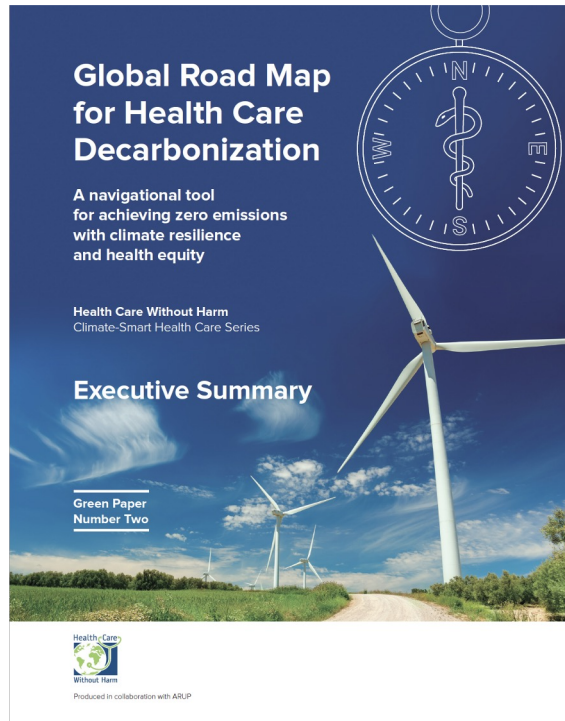

Health Care's Climate Footprint

4.4% of global net emissions

If the healthcare sector were a country, it would be the fifth largest emitter in the world

EVOLUTION

Global Road Map for Health Care Decarbonization

First of its kind

Zero emissions is achievable, and it can be equitable

Fact sheets for 68 countries

OPERATION ZERO

VISION

That every country in Europe:

- Commits to delivering net-zero healthcare, and
- Develops a national decarbonisation roadmap for its healthcare sector, that charts a 'Paris compatible' course to net-zero emissions.

OPERATION ZERO

OBJECTIVE

To develop and pilot a methodology that can be applied by any national or regional health authority to produce a healthcare carbon footprint and decarbonisation roadmap to net-zero emissions.

METHODOLOGY

WHAT IS IT?

A document containing a guiding set of principles and methods that will support any national/regional/municipal health authority in developing a roadmap for the decarbonisation of its own healthcare system.

BUILDING MOMENTUM

- First Health Pavilion
- COP26 Health Programme
- 50+ countries making commitments to low carbon and climate-resilient healthcare
- 9 European countries: Belgium, Denmark, Germany, Georgia, Ireland, Netherlands, Norway, Spain and UK – representing almost 60% of healthcare emissions
- Commitments have been made – time to plan and act

CLOSING REMARKS

- Methodology developed in collaboration, to be applied by any national/regional/municipal healthcare authority. Encourage adoption.
- Need for increased collaboration and ‘community of practice’ to share learning and best practice
- Build on momentum - Methodology provides the platform on which to build up to national level roadmaps and action in Europe
- Thanks to our partners!
