

Health Care Without Harm Europe Workshop, Inverness 21/6/17 "Pharmaceuticals & Priority Chemicals in the Highlands & Islands Environment"

One Planet Prosperity, Innovation, & Ecological Public Health

Cath Preston & John Redshaw
Scottish Environment Protection Agency

The workshop aims to explore what actions should be taken to address threats from pharma and priority chemicals in our environment

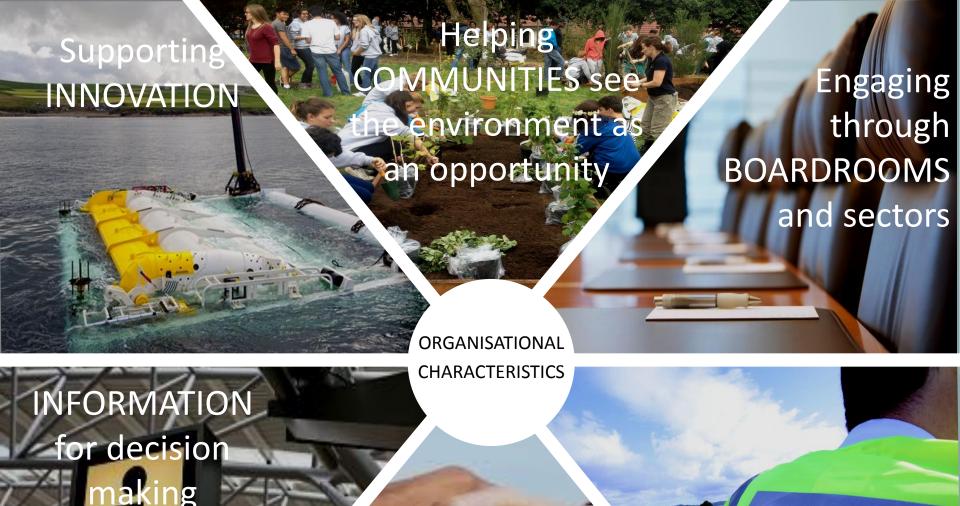

21st century environmental challenges

Today's problems are more complex and inter-related

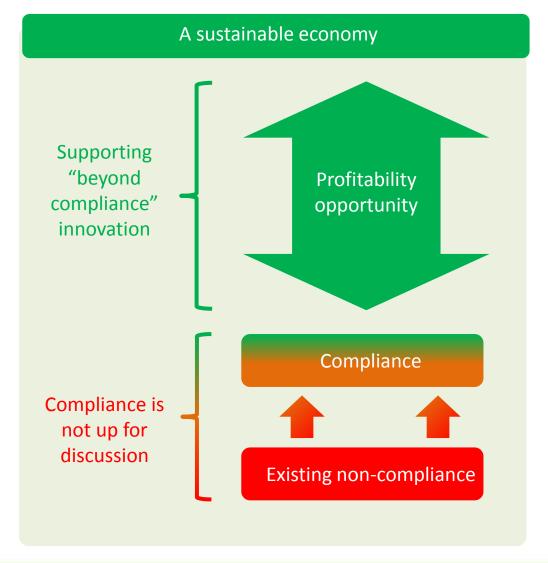

people

work for

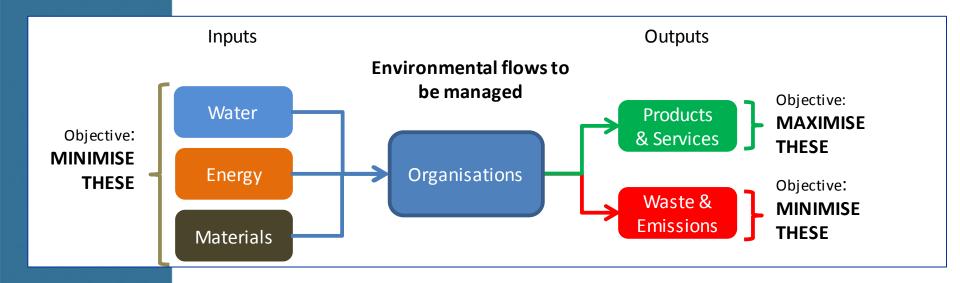

Regulating for prosperity within planetary constraints

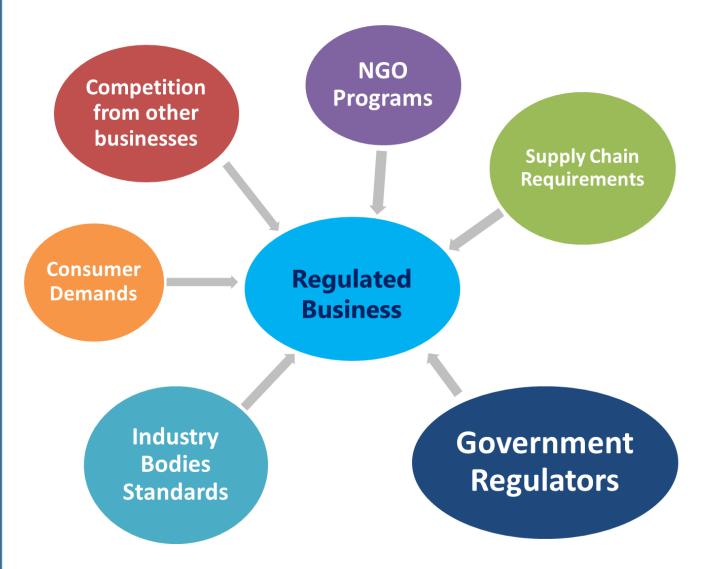

Objectives

Influences

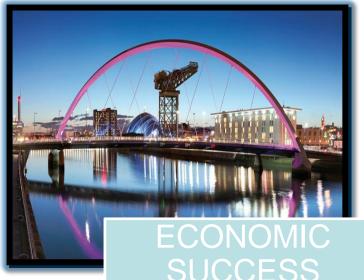

Benefits

Ecological Public Health (EPH)

- Many factors affect the relationship between our environment & health. EPH integrates these into a framework for delivering public health.
 - Conceptual models are used for issue-framing, evidence, engagement & communication.
 - Must build public health on ecological principles.

GOOD PLACES, BETTER HEALTH

A NEW APPROACH TO ENVIRONMENT
AND HEALTH IN SCOTLAND

IMPLEMENTATION PLAN

Case studies

- Hazardous chemicals in the water environment.
- Land spreading of organic materials.
- Antimicrobial resistance.

Chemicals Investigation Programme

- 45 priority substances (WFD-PSD).
- Scotland to achieve EQS-compliance by 2027.
- Evolving "Watch List" (e.g. antibiotics, steroids).
- Inform investment in waste water treatment.

Tracking hazardous substances in the environment

Land spreading of organic materials

(ZWS; SEPA regulates; risk-assessed 80 organic chemicals)

| Chemical | Group | Env risk | | • | Reason for risk |
|--------------------|------------|-------------|---|--------------------------------|--------------------------------------|
| Tetracycline | Veterinary | 1 | 1 | Manure/ slurry | High spread rate, high PEC, low PNEC |
| Ivermectin | Veterinary | 7 | 4 | Manure/ slurry | High spread rate, high PEC, low PNEC |
| Triclosan | Biocide | 12 | - | Bio-solids, other wastes | Low PNEC, persistent |
| ННСВ | Fragrance | 13 | - | Bio-solids | Low PNEC, persistent |
| Benzo[a] pyrene | PAH | 17 | - | All organic materials | Low PNEC, persistent |
| Dioxins | POP | 15 | - | All organic materials | Low PNEC, persistent |
| PBDEs | POP | - | 3 | All organic materials | Low HCV |

Antimicrobial resistance in Scotland

- HPS is delivering the UK AMR strategy in Scotland ("One Health" approach).
- A group (SEAG) has been created to promote understanding, awareness, surveillance, research, & interventions on environmental AMR.

Health and science reporter, BBC News website

woman in the US, officials report.

England's chief medical officer warns of 'antibiotic apocalypse'

Efficiency of antibiotics falling as deaths in EU and US hit around 50,000 annually from infections drugs can no longer treat

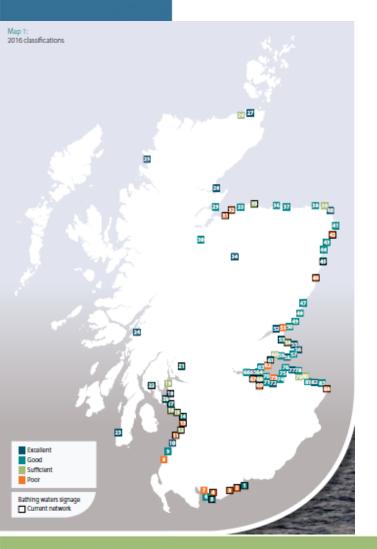

Bug resistant to all antibiotics kills woman

Screening for AMR in Scotland

Screening of waters found 23% of *E.coli* with resistance to <u>cefotaxime</u>, an antibiotic used to treat serious infections in hospitals.

Donald Morrison, Napier University.

Funds sought to investigate distribution & prevalence of AMR in water environment & links with human activity (WWT; agric).

Precursor to a surveillance programme?

Use & disposal of chems/pharma

- Need risk-based action. Presence ≠ risk.
- Much monitoring & more planned (antibiotics, pharma, & micro-plastics).
- More education & advice (e.g. better diagnosis &prescription of antibiotics (O'Neill).
- Re substitution: consider patient impact, costbenefit & footprint (e.g. carbon, water, waste).

Concluding remarks

- SEPA will continue to work in partnership with others to protect and improve Scotland's environment in ways, where possible, also deliver social and economic success.
- SEPA is keen to support the NHS Highland Sustainable Health Care programme and to explore how it might contribute to it.
- The case studies provide examples of work that SEPA is doing that may be of help.
