

 **HEALTH CARE**
Climate Challenge

The Challenge

Climate Change is exacerbating a wide range of **health problems** the world over.

As the climate crisis continues to accelerate, GGHH is organizing the Health Care Climate Challenge to **mobilize health care** around the world to protect public health from climate change.

Carbon Footprint of the Health Sector

~3-5% of the annual carbon emissions of developing countries comes from the health sector

~5-7% of the annual carbon emissions of developed countries comes from the health sector¹

1- World Bank- Climate-Smart Health Care: Low-Carbon and Resilience Strategies for the Health Sector. 2017

Health care is not prepared for climate change

Health Care's Opportunity

Health Care contributes to CO2 Emissions

- Health Care can set a powerful example by reducing emissions

Health Care is on the front line of climate change

- We need to prepare for the impacts of extreme weather and the shifting burden of disease

Health Care can lead the way

- Health care can influence change by encouraging policies, investment strategies, etc.

The Challenge is based on three pillars:

- **Mitigation** – Reducing health care’s own carbon footprint.
- **Resilience** – Preparing for the impacts of extreme weather and the shifting burden of disease.
- **Leadership** – Educating staff and the public while promoting policies to protect public health from climate change.

Objectives:

Engage **leading hospitals and health** systems from across the globe to make major commitments to reducing their carbon footprint.

Measure collective **health sector carbon footprint reduction**.

Encourage the development of increasingly **climate-smart health systems** around the world.

Mobilize health care to play a **leadership role** to advocate for a healthy climate via economic, policy and communications strategies.

Who Can Participate?

Hospitals, health centers health systems and health organizations **from everywhere in the world** are encouraged to participate and help foster climate-smart health care

How to Participate

Each participant will:

- **Sign a pledge** to reduce their carbon footprint, become more climate resilient and exert leadership for a healthy climate.
- **Establish carbon reduction targets**
- **Share data** on progress over time.
- **Compete for Health Care Climate Awards** which will recognize leaders globally, by region, and for each of the three pillars.
- **Receive an automatic membership in GGHH** and with it, access to member exclusive tools and resources.

Participants from around the globe:

The Health Care Climate Challenge currently has over 180 participants, representing the interests of more than 17,500 hospitals and health centers in 26 countries.

Climate Champion Awards

The **IMPACT** of the Health Care Climate Challenge

By the year 2020, Challenge participants are committed to reducing their cumulative greenhouse gas emissions

16 MILLION METRIC TONS OF CO₂e

This is equivalent to

A year of carbon emissions from **4 COAL FIRED POWER PLANTS**

Emissions reduction from installing and running **4 THOUSAND WIND TURBINES** for a year

1.7 MILLION (U.S.) homes' energy use for one year

SAVING \$1.7 BILLION (USD) in health costs related to air pollution (*)

Climate Challenge participants also report saving **US\$381 MILLION** through energy efficiency and renewable energy generation.

Greenhouse gas equivalents calculated using the U.S. EPA Greenhouse Gas Equivalencies Calculator: <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>

(*) Approximation based on the operation of four coal-fired power plants for one year. Sources: Epstein et al.
